Abstracts

According to our (Global Info Research) latest study, the global Food Grade Sodium Pyrosulfite market size was valued at US\$ 320 million in 2025 and is forecast to a readjusted size of US\$ 442 million by 2032 with a CAGR of 4.8% during review period.

Food Grade Sodium Pyrosulfite is a white or slightly yellow crystalline powder with a strong sulfur dioxide odor. It is a widely used chemical additive in the food industry. It is mainly used as a bleaching agent, preservative, and antioxidant, and is widely used in the production of preserved fruits, biscuits, sugar, rock sugar, maltose, candies, glucose, bamboo shoots, mushrooms, canned goods, and fruit wines.

Upstream production mainly relies on soda ash (sodium carbonate) and sulfur. Sulfur combustion produces sulfur dioxide, which then reacts with a soda ash solution, followed by absorption, crystallization, dehydration, and drying to produce the final product. Fluctuations in energy prices and mineral resources directly determine its production cost. Midstream production hinges on purity control during processing; the difference between food-grade and industrial-grade lies in the stringent refining process to remove heavy metals and impurities. Currently, China is the world's main production base.

Global sales are projected to reach approximately 920,000 tons in 2025, with an average selling price of US\$338 per ton. The industry's gross profit margin is around 18%-20%.
