Oligosaccharides (or oligosaccharides) refer to the general term for sugars whose molecular structure is formed by connecting 2 to 10 monosaccharide molecules with glycosidic bonds. The molecular weight is 300-2000, between monosaccharides (glucose, fructose, galactose) and polysaccharides (fiber, starch), and there are disaccharides, trisaccharides, and tetrasaccharides. Oligosaccharides as 'food for specific health use' refer to a type of oligosaccharides that have special biological functions and are especially beneficial to gastrointestinal health, so they are also called 'functional oligosaccharides'. Soy oligosaccharides are the general term for soluble sugars in soybeans. The main ingredients refer to sucrose (disaccharides), raffinose (trisaccharides) and stachyose (tetrasaccharides) with a monosaccharide number of 3 to 4.
