## Abstracts

According to our (Global Info Research) latest study, the global Food Grade Urolithin A market size was valued at US\$ 20.9 million in 2024 and is forecast to a readjusted size of USD 31.2 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Urolithin A is a natural compound with multiple biological activities. It is a yellow or light yellow solid powder at room temperature and pressure. It can be dissolved in highly polar organic solvents such as dimethyl sulfoxide and N,N-dimethylformamide, but has poor solubility in low-polar petroleum ether and ether, and also has poor solubility in water.

Urolithin A is a secondary metabolite of the natural polyphenol compound ellagitannin metabolized by intestinal microorganisms, and is also an intestinal microbial metabolite of ellagic acid. After the human body ingests ellagitannin and ellagic acid, urolithin A is metabolized by intestinal flora.

Urolithin A can inhibit the activity of nuclear factor  $\kappa$ B (NF- $\kappa$ B), reduce the production of inflammatory factors, and thus reduce inflammatory damage. As a mitochondrial autophagy inducer, urolithin A can prevent muscle aging and promote cell health, thereby playing an anti-aging role. It can also inhibit the activity of telomerase and delay cell aging. Urolithin A can scavenge free radicals in the body, protect cells from oxidative damage, and maintain the normal physiological functions of the body. It can

also bind to peroxisome proliferator-activated receptor ? (PPAR?) and activate the PPAR? signaling pathway, thereby enhancing the antioxidant capacity of cells.

As consumers' health awareness continues to improve, the demand for foods with health functions is increasing. Urolithin A, as a natural compound with multiple biological activities such as anti-inflammatory, anti-aging, and antioxidant, meets the pursuit of healthy food by modern consumers.

The continuous deepening of scientific research provides a solid theoretical basis for the development of food-grade urolithin A. Many studies have shown that urolithin A has many benefits such as improving metabolism, enhancing immunity, and promoting intestinal health. These research results provide strong support for its application in the food field.

As people's demand for healthy food increases, the market demand for food-grade urolithin A continues to expand. From dietary supplements to functional foods, the application fields of urolithin A are becoming more and more extensive, providing broad space for the development of the market.

Although urolithin A has received much attention in the field of scientific research, consumers' awareness of this new natural compound is still limited. This may lead to low market acceptance and affect the promotion and sales of food-grade urolithin A.
