A colloid, also called a colloidal system, is a chemical system that features very fine particles suspended in a continuous medium. Hydrocolloids, as the name indicates, are colloidal long-chained polymeric systems made of fine particles and dispersed in water. Depending on how much water has been used, hydrocolloids could occur in the form of either gels or sols.

Given their physical attributes, hydrocolloids are used in numerous applications. Their range of application in the food industry is especially wide because they carry the capability to modify the rheology of virtually any system to which they're added. The other main applications of hydrocolloids are seen in the cosmetics and pharmaceuticals sector.

Global Food Hydrocolloids key players include Kraft Foods Group Inc., JM Huber Corp(CP Kelco), Fufeng, Ingredion, etc. Global top four manufacturers hold a share nearly 25%.

Europe is the largest market, with a share over 30%, followed by China, and North America, both have a share about 40 percent.

In terms of product, Guar gum is the largest segment, with a share over 30%. And in terms of application, the largest application is Jelly or Pudding, followed by Processed

meat, Beverage, Dressing or sauce, etc.
