## Abstracts

The global Food Metal Detector market size is expected to reach \$ 541 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Food metal detector is a device specifically designed to detect metal impurities in food. It is based on the principle of electromagnetic induction or other advanced detection technologies, and can quickly and accurately detect metal foreign objects such as iron, stainless steel, copper, aluminum, etc. mixed in food during food production, processing, packaging, and other processes. These metal foreign objects may come from raw materials, wear and tear of production equipment, or human factors. Once they enter food, they not only affect the quality and taste of the food, but may also pose serious health hazards to consumers. Therefore, food metal detectors play a crucial role in ensuring food safety.

This report studies the global Food Metal Detector production, demand, key manufacturers, and key regions.
