The equipment in food and beverage processing refers to processing machines, components, systems used to cook, handle, package, prepare or store food and food products. Although this equipment is primarily aimed towards consumability, preservation, palatability, few pieces of equipment also perform auxiliary or main functions such as preparation, handling and packaging. To execute the various unit operations necessary during a complete production cycle, such as separating, baking, mixing, freezing, washing and sealing, a wide range of food processing equipment are available. These equipments are employed to produce food and food product applications such as bakery goods to beverages and dairy. The food processing equipments can be designed and constructed to handle solid, semi-solid and liquid products, in a batch-wise or continuously, depending on the demands of the operation.
