Abstracts

The global Food Preservative Sodium Benzoate market size is expected to reach \$ 544 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

In 2025, global sales of Food Preservative Sodium Benzoate reached 250,000 tons, with an average selling price of US\$1,500 per ton. Food Preservative Sodium Benzoate is a widely used preservative in the food industry, primarily used to inhibit the growth of bacteria, molds, and yeasts, thereby extending the shelf life of food. It prevents microbial contamination of food by inhibiting the metabolic processes of microorganisms and is widely used in jams, juices, beverages, yogurt, condiments, and various packaged foods. Sodium benzoate is usually produced through chemical synthesis, with benzoic acid and its sodium salt as the main raw materials. Upstream raw material suppliers are mainly benzoic acid producers and related chemical companies, while the downstream market includes various food processing plants, beverage manufacturers, and preservation technology service companies. With increasing global emphasis on food safety and growing demand for extended shelf life, the demand for sodium benzoate in the food preservation field is gradually rising. The total production capacity of this product is expected to reach 320,000 tons, with a gross profit margin maintained at around 20%. Downstream consumption is mainly concentrated in various food production enterprises, while upstream material consumption includes the procurement of benzoic acid and its sodium salt. With the rapid development of the global food processing industry and the increasing demand from consumers for high-quality, long-shelf-life foods, sodium benzoate has a promising future market prospect, especially in emerging markets such as the Asia-Pacific region and Latin America.

The market outlook for Food Preservative Sodium Benzoate is steadily growing,

primarily driven by increasingly stringent global food safety standards and growing demand for foods with longer shelf lives. As a preservative widely used in fruit juices, jams, and condiments, sodium benzoate has become an important raw material in the food processing industry due to its high efficiency, low cost, and good antibacterial properties. However, with increasing consumer health awareness and a preference for natural food ingredients, the application of sodium benzoate in the market faces certain challenges. In particular, increasingly stringent regulations on the use of additives in some regions have led to gradual restrictions on the use of sodium benzoate. Furthermore, the rise of natural preservatives and alternatives, such as natural plant extracts and fermented preservatives, has increased competitive pressure on the sodium benzoate market. Nevertheless, sodium benzoate still dominates in traditional food processing sectors, especially in price-sensitive markets where demand remains strong. In the future, with technological advancements and increasingly demanding consumer requirements for food ingredients, sodium benzoate may face more challenges from alternatives, but its cost-effectiveness and wide applicability will ensure its continued importance in the global food preservation field, particularly in developing countries and emerging markets.
