Abstracts

Spray drying is a method of producing a dry powder from a liquid or slurry by rapidly drying with a hot gas. This is the preferred method of drying of many thermally-sensitive materials such as foods and pharmaceuticals.

Scope of the Report:

This report focuses on the Food Spray Drying Equipment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Food spray drying equipment is extensively used to dry milk to produce milk powders. The spray drying technology is used to produce various milk products such as skim milk powder, whole milk powder, casein, infant formula, ice cream mix, whey permeates, and whey protein concentrates.

Pressure single-fluid nozzle atomizer is the most commonly and widely used atomizer for spray drying the food products because they have a wide range of benefits over other atomizers. They are highly preferred because they are energy-efficient and available at low-cost. The segment will continue to grow during the estimated period because the pressure single-fluid spray nozzle atomizer produces narrow-sized, high-density, thicker, and free-flowing powders.

The worldwide market for Food Spray Drying Equipment is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
