The global Food Temperature Controlled Packaging market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Food temperature-controlled packaging is a type of packaging used to maintain the temperature of perishable food items during transportation and storage. The packaging is designed to keep food at a specific temperature range to prevent spoilage, contamination, and the growth of bacteria. There are different types of temperature-controlled packaging available, such as insulated bags, containers, and boxes. These packaging materials are made from insulating materials such as foam, polystyrene, or polyurethane, which help to maintain the temperature of the food for an extended period. Temperature-controlled packaging is commonly used in the food industry to transport and store perishable food items such as fresh produce, meat, dairy, and seafood.
