A Texture Analyser is a texture measurement system that moves in either an up or down direction to compress or stretch a sample. The travelling arm is fitted with a load cell and records the force response of the sample to the deformation that is imposed on it. Force, Distance and Time data is collected and usually presented as a curve on a graph which, when analysed, indicates the texture of the sample. Texture Analysers provide the operators with ultimate control and test flexibility for measuring all types of physical/textural properties of solid and semi-solid systems by their ability to accommodate a wide range of probes and fixtures (devices to test food structure) that can be attached to the Texture Analyser base and/or arm. A Texture Analyser is the source of ultimate objective quantification of whether the food is 'more crispy, firm, sticky, etc. as a result of a new technique or the addition of a certain ingredient to the formulation.
