Abstracts

According to our (Global Info Research) latest study, the global Food Traceability Chain Management market size was valued at US\$ 845 million in 2025 and is forecast to a readjusted size of US\$ 1344 million by 2032 with a CAGR of 6.8% during review period.

Food traceability chain management refers to a comprehensive management system for the systematic collection, recording, linking, and sharing of key information throughout the entire lifecycle of food?spanning primary production, processing, packaging, warehousing, transportation, and distribution, right up to final consumption.

The growth of the food traceability chain management market is primarily driven by stricter food safety regulations, rising consumer demand for transparency regarding food origins, increasing supply chain complexity, higher expectations for recall efficiency, and the expansion of fresh cold-chain logistics and cross-border food trade. As the food supply chain?spanning cultivation and breeding, raw material procurement, processing and production, warehousing and transport, cold-chain distribution, and final sales?continues to lengthen, enterprises must digitally record and track the entire process. This includes supplier qualifications, raw material batches, production records, quality inspection reports, inventory flow, temperature and humidity data, and sales destinations. Such capabilities enable companies to rapidly pinpoint the specific stage where a quality issue arose, identify at-risk batches, and execute precise recalls. Meanwhile, the application of technologies such as QR codes, RFID, the Internet of Things (IoT), blockchain, and cloud platforms enables food enterprises to achieve 'farm-to-table' visibility. This enhances regulatory compliance, brand trust, and supply chain operational efficiency, driving the evolution of food traceability chain management from a simple anti-counterfeiting verification tool into an integrated management platform that

encompasses quality and safety, supply chain collaboration, and risk early warning systems.
