According to our (Global Info Research) latest study, the global Food Waste Bio Digester market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Food waste bio digester is a device that converts organic waste, such as food scraps, into biogas and fertilizer through a natural process called anaerobic digestion. Anaerobic digestion involves microorganisms that break down organic matter in the absence of oxygen, producing biogas (mainly methane and carbon dioxide) and digestate (a nutrient-rich solid or liquid residue). Biogas can be used as a renewable energy source for cooking, heating, electricity generation, or vehicle fuel. Digestate can be used as a soil amendment or fertilizer for agriculture or gardening. Food waste bio digesters can help reduce greenhouse gas emissions, landfill waste, and disposal costs, while providing valuable products from waste.
