## **Abstracts**

Foot Insoles provide cushioning and minor support in your shoes. Because the material is soft and deforms easily, they need to be changed every three to six months on average. They may function as shoe deodorizers, provide arch support, or offer targeted relief to the heel, midsole, or ball of the foot (metatarsus).

### **Scope of the Report:**

This report focuses on the Foot Insoles in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The medical insoles segment will continue to dominate the market with highest market share. Its higher penetration rate in the foot insoles market can be attributed to the medical and therapeutic advantages it offers to diabetic and obese patients. Also, an increase in the number of knee-related injuries has propelled physicians to suggest medical insoles which not only reduces the risk of injuries but also improves the knee or joint pain.

Polypropylene insoles dominated the market and accounted for the largest market share. The major reason for the growing preference for polypropylene insoles is its properties of semi-rigidity, flexibility, and durability over other materials. Polypropylene insoles provide dynamic stability to the foot while walking or participating in sports. They help guide the foot through proper functions, enabling the muscles and tendons to perform more efficiently. They are available with several flexibility options, top cover alternatives, optional heel posting, and a variety of intrinsic adjustments. The polypropylene insoles market will be the fastest-growing segment in the market owing to the high adaptability in multiple shoe types.

The worldwide market for Foot Insoles is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
