## Abstracts

According to our (Global Info Research) latest study, the global Foot-Operated Suction Device market size was valued at US\$ 261 million in 2024 and is forecast to a readjusted size of USD 361 million by 2031 with a CAGR of 4.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The Foot-Operated Suction Device is a manually driven negative-pressure generator that converts pedal motion into continuous or intermittent suction through mechanical transmission, enabling the removal of exudate, blood, tissue debris, and other biological materials from surgical incisions, wounds, or body cavities. Its key components include a foot-pedal drive unit, a pressure-regulation valve, a collection reservoir, and connecting tubing, allowing independent operation without external power or gas supplies. This device is valued for its portability, instant responsiveness, and power-independence, making it suitable for surgical procedures, emergency trauma care, and resource-limited medical settings, particularly for urgent interventions or short-term applications.

Typical products include: MGE's SAM ManuVac, Narang's SU09, etc.
