According to our (Global Info Research) latest study, the global Foot Orthotics Insoles market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Foot orthotics insoles provide cushioning and minor support in your shoes. Because the material is soft and deforms easily, they need to be changed every three to six months on average. They may function as shoe deodorizers, provide arch support, or offer targeted relief to the heel, midsole, or ball of the foot (metatarsus).

Shoe insoles can correct a variety of biomechanical foot problems (including pronation and supination) while helping stabilize and cushion vulnerable arches and midsoles. They are especially useful for athletes who are prone to overuse injury, have stability issues, or are experiencing foot, knee, hip, or lower back pain while on their feet.

Foot orthotic insoles are intended to support or correct the abnormal or irregular walking pattern. They change the angle at which the foot strikes while walking and therefore assist the limb or the torso to restore the alignment and positioning of the foot. These insoles amend the postural stability by enhancing the afferent somatosensory information available to the central nervous system and provide arch support and pain relief for a myriad of foot conditions including flat feet.

In United States, Foot Orthotics Insoles key players include Dr. Scholl's (Bayer), Implus, Superfeet, etc. Global top three manufacturers hold a share about 30%.

The South is the largest market, with a share about 25%, followed by The Middle

Atlantic, and The Midwest, both have a share over 45 percent.

In terms of product, Polypropylene is the largest segment, with a share nearly 50%. And in terms of application, the largest application is Medical, followed by Sports, etc.
