## Abstracts

The global Force Guided Mechanical Contact Relay market size is expected to reach \$ 715.3 million by 2029, rising at a market growth of 3.3% CAGR during the forecast period (2023-2029).

The industrial sector is very susceptible to various breakdowns, electrical and mechanical hazards and there is a real need to take some measures to ensure the safety of workers and protect industrial machinery. Adopting strict security measures has been a complex task for organizational authorities since the days of the Industrial Revolution. Past experience has shown that injuries and fatalities occur in industrial working environments, which do not guarantee the protection of workers. These malfunctions and accidents also cause huge monetary losses to industry owners. It has become very necessary to formulate strict laws for the industrial sector to ensure safety and protective measures. Increased mechanization in various end-use industries such as factory automation and metallurgy to maximize demand. Legislation from regulatory agencies requiring the installation of such relays at production sites to enhance workplace safety is expected to drive demand.

Force guided mechanical contact relays are designed to make it impossible for all circuits to be closed at the same time. Mechanically linked contact relays are electromechanical switching devices that provide a safe monitoring of contacts within circuits. The mechanically linked contact relay design is completely different from a conventional control relay.
