According to our (Global Info Research) latest study, the global Force Tester Calibration Services market size was valued at US\$ 305 million in 2025 and is forecast to a readjusted size of US\$ 429 million by 2032 with a CAGR of 5.0% during review period.

To address the issues of accuracy drift, inaccurate measurements, and lack of credibility in force measurement instruments during use, traceable force testing instrument calibration services have emerged. Since the establishment of the modern mechanical metrology system in the mid-20th century, high-precision force measurement and calibration technologies have made significant progress. Currently, force testing instrument calibration services have evolved to encompass static and dynamic calibration of various instruments, including tensile and compressive strength, torque, and material testing machines. These services are widely used in product quality inspection, materials research and development, automotive parts testing, aerospace, and construction engineering, ensuring accurate and reliable test data and meeting international and domestic standards and certification requirements.
