Abstracts

The global Force Tester Calibration Services market size is expected to reach \$ 429 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

To address the issues of accuracy drift, inaccurate measurements, and lack of credibility in force measurement instruments during use, traceable force testing instrument calibration services have emerged. Since the establishment of the modern mechanical metrology system in the mid-20th century, high-precision force measurement and calibration technologies have made significant progress. Currently, force testing instrument calibration services have evolved to encompass static and dynamic calibration of various instruments, including tensile and compressive strength, torque, and material testing machines. These services are widely used in product quality inspection, materials research and development, automotive parts testing, aerospace, and construction engineering, ensuring accurate and reliable test data and meeting international and domestic standards and certification requirements.
