The global Foreign Object Detection in Food Safety market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the food industry, ensuring that consumable products are contaminant-free is critical for maintaining trust between the brand and consumer. Sometimes, materials like a metal fragment, plastic, stone, or another foreign body can find their way onto the production line, where it contaminates the food products. X-ray inspection systems allow food production companies to maintain quality control, manage risks, and improve the safety of food products. They also increase production efficiency and minimize waste, giving the companies who use them an advantage over competitors, as well as a higher quality food product.
