## Abstracts

According to our (Global Info Research) latest study, the global Forensic Laboratory Service market size was valued at US\$ 272 million in 2025 and is forecast to a readjusted size of US\$ 384 million by 2032 with a CAGR of 5.0% during review period.

Forensic Laboratory Service is a scientific activity that utilizes scientific methods such as biology, chemistry, physics, and information technology, within a legal and judicial framework, to professionally examine, identify, and analyze physical evidence such as biological samples, toxic substances, documents, and electronic data from crime scenes, traffic accidents, medical disputes, and other scenarios. Its core function is to transform objective physical evidence into legally probative scientific conclusions, such as using DNA analysis for individual identification, toxicology testing to determine the cause of death, and handwriting analysis to verify the authenticity of documents. This service directly serves criminal investigations, court trials, and public safety, providing indispensable objective evidence for reconstructing the facts of a case, identifying suspects, and clarifying doubts; it is a core pillar of judicial fairness and scientific evidence.

The Forensic Laboratory Service industry chain consists of upstream reagent and equipment suppliers and downstream public security, procuratorial, and judicial organs, as well as social appraisal clients. Its pricing system is unique. The core costs lie in the enormous depreciation of top-tier analytical instruments (such as mass spectrometers and sequencers), the manpower of highly qualified experts, and strict compliance and quality control. Industry gross profit margins vary greatly depending on the nature of the institution: socialized commercial appraisal institutions tend to have higher margins (reaching 40-60%).
