## Abstracts

According to our (Global Info Research) latest study, the global Forged Crane Wheels market size was valued at US\$ 66.57 million in 2025 and is forecast to a readjusted size of US\$ 101 million by 2032 with a CAGR of 6.1% during review period.

In 2025, global sales of forged crane wheels reached 35,000 units, with an average selling price of US\$1,850 per unit. Forged crane wheels are key components used in heavy machinery such as cranes and gantry cranes, primarily responsible for supporting the rotational movement of the crane boom and load. They require high strength, high wear resistance, and good toughness. Upstream raw materials mainly include high-quality steel, alloy steel, and wear-resistant materials. Midstream companies are forging and machining enterprises responsible for forging, precision machining, and quality control of parts. Downstream suppliers are mainly large machinery manufacturers, crane rental companies, and heavy industry enterprises. Global total production capacity in 2025 was approximately 40,000 units, with an average industry gross margin of approximately 28%. With the growth of global infrastructure construction, the increasing demand for heavy machinery, and the development of the crane industry towards intelligence and energy efficiency, the market demand for forged crane wheels is steadily growing, especially in emerging markets such as Asia, Latin America, and the Middle East, where business opportunities are vast. With technological advancements and the application of new materials, the performance of forged crane wheels will continue to improve, and the future market potential remains enormous.
