The global Forged Detachable Chains market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A forged detachable chain, also known as a detachable chain or simply a detachable link chain, is a type of roller chain commonly used in industrial applications. It consists of a series of interlocking metal links that are designed to transmit mechanical power and motion between rotating shafts or sprockets. The term 'forged' indicates that the chain links are typically made through a forging process, which involves heating metal to a high temperature and then shaping it with a hammer or press. This forging process increases the strength and durability of the chain.
