Abstracts

The global Forged Steel Trunnion Mounted Ball Valve market size is expected to reach \$ 9481.4 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

Ball valves use a rotating ball inside a pipe to allow and stop fluid flow with the help of an actuator. These valves provide precise control of overflow rates in a variety of industries including wastewater and chemicals. These industries use ball valves to ensure proper wastewater treatment. Hence, the growth of these industries supports the demand for ball valves, further driving the growth of the ball valves market. According to the European Environment Agency (EEA), in November 2021, Germany, Austria, the Netherlands and Luxembourg have treated 100% of their municipal wastewater as required by the directive. According to sources, other countries are also taking steps to thoroughly treat wastewater. In another 10 European countries, the urban sewage treatment compliance rate has reached over 90%. Ireland, Bulgaria, Romania, Croatia and Malta are at the other end of the spectrum, with less than half of the urban areas meeting the same criteria. Hence, the increasing installation of wastewater treatment plants in Europe is further driving the growth of the ball valve market. Africa is known for its improved living conditions and higher income levels for its residents. The rise in industrialization has stimulated the demand for electricity, which will drive the growth of the ball valve market in Europe in the coming years. France is pursuing various strategies to achieve its goal of net zero carbon emissions by 2050. The French government has developed a national low-carbon strategy that focuses on improving energy efficiency and increasing the use of renewable energy. According to June 2022 figures from the International Energy Agency (IEA), France's electricity generation will grow from 531,762 GWh in 2020 to 554,821 GWh in 2021. In addition, as electricity generation continues to rise, the government is focusing on building new power plant

sources that generate electricity from renewable sources. The French president said in February 2022 that the country would build 14 new nuclear reactors by 2050 to make France carbon neutral by 2050. Growing electricity production and construction of new power plants will drive the demand for ball valves in the coming years to control fluid and gas flow and stop the flow immediately in emergency situations. To meet the growing demand for ball valves, market players are launching new advanced upgraded ball valves. As reported by SAPAG VALVES January 2021, PVI Valves presents the new three-piece ball valve GACHOT V15. It provides 360 degree orientation for the valve on the pipeline. Hence, this development of market players is driving the growth of the ball valve market in France. It provides 360 degree orientation for the valve on the pipeline.
