According to our (Global Info Research) latest study, the global Forging Furnace Charging and Discharging Machine market size was valued at US\$ 215 million in 2025 and is forecast to a readjusted size of US\$ 311 million by 2032 with a CAGR of 5.4% during review period.

In 2025, global sales volume of Forging Furnace Charging and Discharging Machine was approximately 950 units, with the mainstream enterprise-level average price at around USD 220,000 per unit and the gross margin of major manufacturers at approximately 25%-40%.

Forging Furnace Charging and Discharging Machine is a furnace-front loading and unloading device used in forging production. It is mainly responsible for charging, discharging, clamping, and short-distance transfer of high-temperature workpieces such as billets, steel ingots, shaft parts, and ring forgings. The equipment is generally composed of a traveling mechanism, lifting mechanism, clamping mechanism, slewing mechanism, hydraulic system, and electrical control system, enabling workpiece handling among heating furnaces, forging hammers, presses, ring rolling mills, and other equipment. Compared with ordinary loading equipment, Forging Furnace Charging and Discharging Machine places greater emphasis on high-temperature adaptability, heavy-load clamping capacity, motion stability, and positioning efficiency. It is an important auxiliary equipment for improving forging automation, shortening the time from furnace discharge to forming, and reducing manual operation risks.

The upstream of Forging Furnace Charging and Discharging Machine mainly includes steel structural parts, castings and forgings, hydraulic components, motors and

reducers, bearings, clamping mechanisms, heat-resistant materials, sensors, and PLC control systems. Among them, the hydraulic system, clamping mechanism, and overall structural strength directly affect the equipment's load capacity and service life. The downstream market mainly serves forging processing enterprises and forging manufacturing scenarios in heavy machinery, energy equipment, transportation equipment, aerospace, and other fields. The equipment is usually used in conjunction with forging heating furnaces, open-die forging hydraulic presses, forging hammers, ring rolling mills, and automated conveying systems. As large forging production moves toward automation, labor reduction, and higher efficiency, the supporting value of Forging Furnace Charging and Discharging Machine in forging production lines continues to increase.
