A Forklift Collision Warning System is a safety feature designed to alert forklift operators and pedestrians of potential collisions. The system uses sensors, cameras, or other detection technology to monitor the forklift's surroundings and detect obstacles or people in its path. When a potential collision is detected, the system will typically alert the operator through visual or auditory signals, giving them the opportunity to take evasive action and avoid an accident. This technology helps to improve safety in warehouses and other industrial settings where forklifts are in use.
