According to our (Global Info Research) latest study, the global Formaldehyde Colorimetric Tube market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Formaldehyde colorimetric tubes are a type of gas detection tube used to measure the concentration of formaldehyde gas in the air. These tubes use a color-change reaction to indicate the concentration of formaldehyde gas present. They typically consist of a glass tube containing a reactive material that changes color in the presence of formaldehyde gas. The user would draw a known volume of air through the tube using a pump or syringe and then compare the color of the reactive material to a color reference chart to determine the concentration of formaldehyde gas present. Formaldehyde colorimetric tubes are commonly used in industrial and laboratory settings to monitor for formaldehyde gas emissions from manufacturing processes, and to ensure worker safety in areas where formaldehyde gas is used or produced.
