Formaldehyde-free ecological paint is an environmentally friendly functional paint. It uses water-based resin as the base material, adds nano-photocatalysts (such as titanium dioxide), diatomaceous earth, activated carbon and other purification materials, and continuously degrades indoor formaldehyde, benzene and other harmful gases through catalytic decomposition or physical adsorption technology. It also has low VOC (volatile organic compounds), antibacterial and mildew-proof properties. Its core advantage is that it takes into account both decorative and air purification functions. It is suitable for home, office and other scenes, and meets green building material standards (such as China's Ten-Ring Certification and EU EC1 Plus).
