Abstracts

Forming fluids are a type of metal working fluids used in operations pertaining to the changing of shape and contour of metals. Forming fluids include rolling oils, drawing and stamping compounds, forging compounds, die-casting compounds, and hydroforming fluids. These liquids offer superior lubrication and corrosion protection and thus help prevent scratches or damage to the substrates during molding and fabrication.

Scope of the Report:

This report focuses on the Forming Fluids in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. These liquids offer superior lubrication and corrosion protection and thus help prevent scratches or damage to the substrates during molding and fabrication. Also, most of the forming fluids protect substrates from humidity or acidic conditions that are often encountered in industrial environments. These fluids are formulated using a range of additives that enhance the performance of the composition.

The worldwide market for Forming Fluids is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
