Abstracts

The global Formulation Development Service market size is expected to reach \$ 49820 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Formulation Development Service refers to an integrated outsourced formulation development service for pharmaceutical active ingredients (APIs) or biomacromolecules (such as proteins/antibodies, mRNA/LNPs), encompassing everything from formulation design to process and quality studies. The goal is to obtain scalable formulation solutions that meet target quality attributes (such as dissolution/release, stability, manufacturability, bioavailability, and ease of administration), and to generate development and characterization data for registration applications. Services typically cover formulation screening and optimization, excipient and compatibility studies, stability and packaging compatibility, process development and scale-up, analytical methods/characterization support, and technology transfer connecting with CMC/clinical sample supply/subsequent commercial production.

The demand for outsourced formulation development has been continuously increasing in recent years, driven primarily by: the rise in new molecules and drugs with novel mechanisms of action; the high proportion of poorly soluble small molecules (requiring solubilization/modified release solutions); and the higher requirements for formulation and characterization capabilities posed by biologics and novel delivery systems (such as long-acting injections, inhalations, ophthalmic formulations, and LNPs). Simultaneously, increased requirements for bioequivalence, quality consistency, and full lifecycle management have shifted formulation development from 'laboratory formulations' to engineered capabilities that are 'scalable, registrable, and stably supplied,' driving CDMOs/CROs to increase platform investment (high-throughput

screening, QbD, DoE, and digital data management).

In terms of the competitive landscape, clients prefer service providers that can offer a one-stop service encompassing 'formulation + analytical characterization + clinical sample supply/scale-up manufacturing + application support' to reduce project handover risks and shorten CMC cycles. Furthermore, specialized services for specific dosage forms/routes of administration (such as inhalation, aseptic injection, ophthalmic formulations, and lipid/polymer nanodelivery) command a higher premium. On the other hand, pressure on prices and delivery cycles is also increasing, and service providers are improving their win rates by offering standard platform packages, modular pricing, and differentiation in key areas (stability prediction, prescription manufacturability assessment, technology transfer packages).
