According to our (Global Info Research) latest study, the global Forward Collision Avoidance Assist market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Forward Collision Avoidance Assist (FCA) is an advanced safety feature in vehicles designed to help prevent or mitigate the severity of frontal collisions. Utilizing a combination of cameras, radar sensors, and other detection technologies, FCA continuously monitors the road ahead for potential obstacles such as other vehicles, pedestrians, or objects. When a potential collision is detected, the system alerts the driver with visual and auditory warnings. If the driver does not take corrective action, FCA can automatically apply the brakes to reduce the vehicle's speed and, if possible, bring it to a complete stop to avoid the collision or lessen its impact. This technology significantly enhances driving safety by providing an additional layer of protection against unforeseen hazards.
