A forward collision warning system is an automobile safety system designed to prevent or reduce the severity of a collision. It is also known as a precrash system, collision avoidance system, or collision mitigating system. It uses radar (all-weather) and sometimes laser (LIDAR) and camera (employing image recognition) to detect an imminent crash. GPS sensors can detect fixed dangers such as approaching stop signs through a location database.

Europe was the largest market, followed by North America and Asia-Pacific. Regulations have driven the market for collision avoidance systems to reduce the collisions and mitigate the effects of imminent collisions (accidents).
