## Abstracts

The global Forward Facing ADAS Camera market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In recent years, the installation rate of automotive ADAS advanced driver assistance systems is growing rapidly. Five departments including the Ministry of Transport of China jointly released the 'Intelligent Connected Vehicle Technology Roadmap 2.0', proposing the development goal of autonomous driving: the sales volume of L2 and L3 new vehicles will reach 50% in 2025, and the sales volume of L2 and L3 new vehicles will reach 50% in 2030. More than 70%, L4 accounted for 20%. Europe, the United States and Japan have also formulated relevant strategic plans to support research in the field of autonomous driving. In terms of regulations, South Korea is the first country in the world to formulate safety standards for L3 autonomous driving and formulate commercialization standards. Global support policies and landing standards work together to escort the development of intelligent driving.

Looking at major manufacturers, a number of L2+ and above smart models will be launched in 2022, and the world will usher in the transition from L2 to L3/L4. ADAS basically focuses on L2-L3 level autonomous driving. In order to realize these functions, only car perception In the system, the number of cameras used is basically more than five. Technology companies and auto parts suppliers will continue to invest in research and development to promote continuous innovation and improvement of forward-facing ADAS camera technology, including higher resolution, wider field of view, enhanced low-light performance, and more advanced artificial intelligence algorithm etc. At the same time, consumers' demand for car safety and driving convenience is increasing. As a key technology for providing higher-level driving assistance, forward-facing ADAS cameras will receive more attention and demand from consumers.

The forward-facing ADAS camera is an important sensor used in automotive advanced driver assistance systems (ADAS). It is located at the front of the vehicle and monitors road and traffic conditions in real time, providing visual information and assistance functions to the driver. It uses high-resolution image sensors and advanced computer vision algorithms to identify and track vehicles, pedestrians, traffic signs and road markings on the road. Its features include collision warning, adaptive cruise control, lane keeping assist, pedestrian and bicycle detection, traffic sign recognition, and road departure warning, among others.
