## Abstracts

The global Foundry Additives market size is expected to reach \$ 2202 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Casting additives are substances used in the metal casting process to improve the properties of sand molds, cores, or the quality of molten metal. They can effectively prevent casting defects, reduce the amount of molding sand used, improve the surface quality of castings, increase strength, and enhance high-temperature performance.

The upstream sector primarily relies on basic chemical raw materials and mineral resources. This includes mineral materials such as bentonite, coal powder, and graphite, as well as organic chemical products such as synthetic resins (e.g., furan resins and phenolic resins), curing agents, and catalysts. Manufacturers use physical compounding, chemical synthesis, or coating technologies to prepare binders, coated sand additives, coatings, and inoculants.

Global sales volume reached approximately 1.09 million tons in 2024, with an average selling price of US\$1,500 per ton. The industry's gross profit margin is generally around 10%-25%.

Casting additives are core functional materials for achieving lightweight, thin-walled, and complex structures in castings. As global manufacturing demands increasingly stringent energy efficiency and low emissions requirements, the industry focus has shifted to developing novel binders and auxiliary materials with low gas evolution, inorganic and ammonia-free properties, and bio-based characteristics.

The industry's driving force primarily stems from the explosive demand for precision castings in aerospace, new energy vehicles, and high-end energy equipment. In the

automotive sector, the trend towards integrated die casting and ultra-thin-walled cylinder blocks requires additives to possess extremely high thermal stability and excellent collapsibility to ensure efficient cleaning of complex internal cavities.

This report studies the global Foundry Additives production, demand, key manufacturers, and key regions.
