Foundry Moulding Equipment refers to industrial machinery used in foundries to produce sand molds, cores, and cavity structures for metal casting processes. These systems compact, fill, shoot, separate, and shape molding sand into molds suitable for molten metal pouring. The upstream segment of the foundry moulding equipment industry mainly includes suppliers of steel materials, cast components, hydraulic systems, servo motors, PLC controllers, industrial robots, pneumatic components, wear-resistant materials, and industrial sensors. High-end systems require advanced hydraulic control, precision automation, and durable wear components.

The global foundry moulding equipment market is evolving toward automation, high-pressure molding, intelligent manufacturing, and energy-efficient production. Growing demand from electric vehicles, wind power, heavy machinery, and industrial equipment is driving investment in advanced automatic moulding lines. Flaskless molding, vertical molding, and high-speed high-pressure molding technologies are becoming mainstream across modern foundries.
