According to our (Global Info Research) latest study, the global Foundry and Forging Robots market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Foundry robots are revolutionizing foundry operations due to their ability to enhance productivity with high speed and efficiency with minimal wastage. Metal casting, automobile, and semiconductor foundries are the three main industries in which foundry robots play a major role in operations.

The metal foundry industry accounted the largest share of the global foundry and forging robots market and is likely to continue its dominance during the forecast period as well. Several ongoing and planned investments in the manufacturing and power plant construction projects require various industrial machinery and products that are made of metal components and parts molded from metal foundries. The increase in demand for metal components will increase the demand for forging robots from these foundries as they primarily use robots to achieve increased production rate, improve quality, and maintain standardization.
