Foundry robots are revolutionizing foundry operations due to their ability to enhance productivity with high speed and efficiency with minimal wastage. Metal casting, automobile, and semiconductor foundries are the three main industries in which foundry robots play a major role in operations.

Scope of the Report:

This report focuses on the Foundry and Forging Robots in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The metal foundry industry accounted the largest share of the global foundry and forging robots market and is likely to continue its dominance during the forecast period as well. Several ongoing and planned investments in the manufacturing and power plant construction projects require various industrial machinery and products that are made of metal components and parts molded from metal foundries. The increase in demand for metal components will increase the demand for forging robots from these foundries as they primarily use robots to achieve increased production rate, improve quality, and maintain standardization.

The APAC will dominate the global foundry and forging robots market. The presence of major countries such as China, Japan, South Korea Taiwan, and India that are increasingly adopting foundry and forging robots in their foundries will drive the growth of the market in this region. This region is currently witnessing the exponential growth of several industries such as construction, power, chemicals, oil and gas, and other manufacturing sectors that require industrial equipment and machinery that use various metal components and parts. Additionally, the growth of the manufacturing sector in

China and India will also increase the adoption of industrial robotics in the next few years.

The worldwide market for Foundry and Forging Robots is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
