Four-Column Palletizer is an industrial equipment used to arrange finished product packages in a specific stacking pattern and place them on pallets. Its structure consists of four vertical pillars, which support core components such as pallet lifting, product conveying and stacking platform. The equipment uses mechanical structures such as mechanical arms, clamping devices or push plates to accurately arrange products in boxes, bags or other packaging forms and stack them on pallets. It is efficient, stable and has flexible layout. The four-column structure gives the equipment extremely high stacking accuracy and load-bearing capacity, and is an indispensable automation equipment in modern production lines.
