A four-column servo press is a press driven by a servo motor. Its structure mainly includes four columns, a workbench and a top plate. The relationship between a four-column servo press and a hydraulic press is that they are both pressure processing equipment used to plastically deform or press-form materials. However, a servo press is driven by a servo motor, which has higher precision, speed and energy efficiency, while a hydraulic press uses a hydraulic system to generate pressure to work.
