## Abstracts

According to our (Global Info Research) latest study, the global Four-Quadrant Triac market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A four-quadrant triac is an electronic device, also known as a four-quadrant triac. It is similar to a three-quadrant triac (TRIAC) but has a wider range of applications. A four-quadrant triac can conduct in both the positive and negative half cycles and can be triggered at both forward and reverse voltages. This allows it to be used in more applications, including motor control, power factor correction, AC power conditioning, etc. A four-quadrant triac usually consists of two antiparallel thyristors (SCRs) that can conduct current in both directions. Its characteristics allow it to have more flexible power control functions in AC circuits.

This report is a detailed and comprehensive analysis for global Four-Quadrant Triac market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.
