Abstracts

According to our (Global Info Research) latest study, the global Fourier Transform Raman Spectroscopy market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Fourier Transform Raman Spectroscopy is a non-destructive analysis method. It usually does not require tedious sample preparation such as film making, paste making, or complex sampling light path adjustment. The sample can usually be analyzed directly in a glass bottle. There is no need to open the package, thus avoiding the possibility of sample contamination or harmful chemicals causing harm to people. Compared with traditional dispersive spectrometers, it has the advantages of high signal-to-noise ratio and high resolution.
