Abstracts

The global FPC Automatic Stiffener Attaching Machine market size is expected to reach $ 198 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

In 2025, global production of FPC Automatic Stiffener Attaching Machines reached approximately 850 units, with an average price of around USD 120,000 per unit. FPC Automatic Stiffener Attaching Machine is a high-end automated equipment used in flexible printed circuit (FPC) manufacturing processes. It integrates high-precision vision positioning systems, multi-axis motion control modules, and thermal compression systems to achieve fully automatic stiffener attachment, covering the entire process from feeding, alignment to lamination without manual intervention. The equipment typically supports both roll-to-roll and sheet-to-sheet feeding methods, and can handle various stiffener materials such as PI (polyimide), SUS (stainless steel), and FR4, with placement accuracy reaching ±0.05mm. It is widely used in FPC manufacturing for smartphones, tablets, wearables, and automotive display modules.

The global FPC Automatic Stiffener Attaching Machine market is experiencing steady growth, driven primarily by the increasing demand for higher process precision as FPCs evolve toward finer line widths/spacing and higher layer counts, as well as the need for fully automated equipment driven by rising labor costs and smart manufacturing upgrades. Compared with semi-automatic and manual machines, fully automatic machines offer significant advantages in placement accuracy, production efficiency, and product consistency. Technological development is focused on high-precision vision alignment algorithms, thermal head temperature field uniformity control, and rapid changeover capability for multiple product types.
