Abstracts

The global FPC Laser Drilling Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

FPC laser drilling machine is a kind of equipment that uses laser technology to drill holes. Its full name is 'Flexible Printed Circuit Board Laser Drilling Machine', and the Chinese translation is 'flexible printed circuit board laser drilling machine'. It is mainly used for precise hole drilling on flexible printed circuit boards (FPC). FPC is a thin and flexible electronic printed circuit board, which is often used in various electronic devices, especially in applications that require bending and folding. On FPC, precise and tiny holes are usually required for functions such as wire connection and circuit access. Traditional mechanical drilling methods can produce broken or unstable results in this thin and flexible material, while laser drilling technology can avoid these problems and provide higher precision and reliability. The FPC laser drilling machine uses a high-energy laser beam to accurately cut or evaporate the FPC material to form the required holes. Because laser technology has a very small focus diameter and high energy density, it can drill holes of small size and high precision without significant thermal impact on the material. This makes the FPC laser drilling machine an important tool in FPC production, which can improve production efficiency and ensure product quality. In general, the FPC laser drilling machine is an advanced equipment specially used for high-precision hole processing on flexible printed circuit boards, and it has broad application prospects in the electronics manufacturing industry.
