Abstracts

The global FPC Polyimide Coverlay Material market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

FPC Coverlay consists of a solid sheet of polyimide with a layer of flexible adhesive. Coverlay plays the exact same function as a solder mask on rigid boards but only for flexible printed circuit boards (PCBs). Conventional solder masks have only a limited bendability, so for flex circuits that require greater bendability, coverlay is bonded (glued) on to encapsulate and protect the external copper circuit layers of a flexible printed circuit (FPC).

This report studies the global FPC Polyimide Coverlay Material production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for FPC Polyimide Coverlay Material, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
