Abstracts

The global FPC Reinforcement Machine market size is expected to reach $ 253 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

In 2025, global production of FPC Reinforcement Machines reached approximately 2,250 units, with an average price of around USD 65,000 per unit. FPC Reinforcement Machine is an automated equipment specifically used in flexible printed circuit (FPC) processing. It utilizes high-precision mechanical positioning systems and hot-press lamination technology to accurately position and firmly attach stiffeners to designated areas of FPCs, enhancing local mechanical strength, bending resistance, and flatness, effectively improving performance stability during subsequent assembly and usage to meet high-precision electronic assembly requirements. By automation level, products can be classified into fully automatic and semi-automatic/manual types; by stiffener material, they include hot press and cold press types. They are widely used in consumer electronics (smartphones, tablets, wearables), automotive electronics (ADAS, infotainment systems), communication equipment, and medical electronics.

The global FPC Reinforcement Machine market is experiencing steady growth, driven primarily by the ongoing trend toward thinner and more multifunctional consumer electronics that increase FPC usage, the expansion of emerging applications such as automotive electronics and wearables, and the industry-wide upgrade toward higher precision and automation in FPC manufacturing processes. Technological development is focused on high-precision vision positioning systems, thermal compression temperature consistency, and fully automatic roll-to-roll and bulk material placement capabilities. Future innovation in consumer electronics, increasing penetration of automotive electronics, and growing demand in industrial electronics will collectively
