## Abstracts

According to our (Global Info Research) latest study, the global FR4 PCB market size was valued at USD 11560 million in 2022 and is forecast to a readjusted size of USD 15930 million by 2029 with a CAGR of 4.7% during review period.

FR4 is a class of printed circuit board base material made from a flame retardant epoxy resin and glass fabric composite. FR stands for flame retardant and meets the requirements of UL94V-0. FR4 has good adhesion to copper foil and has minimal water absorption, making it very suitable for standard applications. FR4 sheets are widely popular among electrical engineers and designers as a PCB base material. The low cost and versatility of the material, as well as its wealth of beneficial physical properties, account for that popularity. FR4 sheets are electrical insulators with high dielectric strength. They also feature a high strength-to-weight ratio and are lightweight and resistant to moisture. Add this to their relative temperature resistance, and FR4 material can perform well in most environmental conditions.

The Global Info Research report includes an overview of the development of the FR4 PCB industry chain, the market status of Consumer Electronics (Single-Sided PCB, Double-Sided PCB), Computer (Single-Sided PCB, Double-Sided PCB), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of FR4 PCB.
