Abstracts

Fracking fluids are a complex mixture of chemicals, water, and sand. The composition of fracking fluids is unique to each company; they alter the composition of fracking fluids depending on the presence of groundwater or surface water.

Scope of the Report:

This report focuses on the Fracking Chemicals and Fluids in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The water-based fluid segment accounted for the major market share in the global fracking fluid and chemicals market and is expected to lead the hydraulic fracturing market during the next few years. Water-based fluids are widely used for fracturing treatment and to recover shale gas and oil. Deep reservoirs require high-density fluids for the efficient fracking process thus increasing the demand for water-based fluids. In term of the geographical regions, the Americas held the highest share and is expected to lead the market in the next few years. The major driving factor is the hydraulic fracturing technique and horizontal drilling in the region allowing the US to produce more oil and gas from unconventional reserves which will further drive the growth of the hydraulic fracturing market in this region.

The worldwide market for Fracking Chemicals and Fluids is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
