According to our (Global Info Research) latest study, the global Frame Type Hydraulic Vulcanizing Press market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The frame-type hydraulic vulcanizing machine is a hot-pressing equipment used for vulcanizing rubber products. It is mainly composed of a frame, a hot plate, a plunger, a hydraulic system, an electrical control system, etc. The characteristics of the frame-type hydraulic vulcanizing press are stable and reliable structure, large mold clamping force, uniform temperature, and easy operation. It is suitable for rubber products of various specifications, such as tires, seals, hoses, etc. The working principle of the frame-type hydraulic vulcanizing machine is to use the hydraulic system to drive the plunger to rise, pressing the hot plate and the mold tightly, so that the rubber product undergoes a vulcanization reaction under high temperature and high pressure, thereby improving the elasticity and durability of the rubber.
