According to our (Global Info Research) latest study, the global Food Antimicrobial Coating market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An antimicrobial surface contains an antimicrobial agent that inhibits the ability of microorganisms to grow on the surface of a material. Such surfaces are becoming more widely investigated for possible use in various settings including clinics, industry, and even the home. The most common and most important use of antimicrobial coatings has been in the healthcare setting for sterilization of medical devices to prevent hospital associated infections, which have accounted for almost 100,000 deaths in the United States. In addition to medical devices, linens and clothing can provide a suitable environment for many bacteria, fungi, and viruses to grow when in contact with the human body which allows for the transmission of infectious disease.

AkzoNobel N.V, BASF SE, PPG Industries Inc., Arch Lonza, DuPont, The Sherwin-Williams Company, Nippon Paint Company Ltd, Koninklijke DSM NV, Sureshield Coatings Company, SK Kaken Co., Ltd, Microban®International?Ltd., Axalta, Bio Shield Tech, Biointeractions and Specialty Coating Systems are the key manufacturters of Anti-Microbial Coatings, with about 53% market shares.
