A free-form optical measurement system is a precision metrology tool used to assess complex, non-standard, or free-form surfaces that cannot be accurately measured with traditional geometric approaches. These systems use advanced technologies such as laser scanning, structured light, or interferometry to capture detailed 3D data on the shape and surface quality of optical components, such as lenses or mirrors, with intricate designs. They are essential in industries like aerospace, automotive, and electronics, where high precision in optical parts is required. By enabling real-time, high-resolution measurements, these systems improve manufacturing accuracy, quality control, and the efficiency of producing customized optical components.
