The HUD free-form surface mirror is a core component applied in head-up display systems. Instead of featuring a conventional spherical or simple aspherical reflective surface, it adopts a complex free-form shape, which is designed to better correct aberrations and achieve a larger field of view. Relying on special optical design, the free-form surface mirror reflects light from the display onto the automobile's front windshield, enabling drivers to view driving information such as vehicle speed and navigation instructions without lowering their heads.
